

NOVAPURE

PREFILLED SYRINGE PLUNGERS

Mitigate Against Risks to Improve Your Chances of Achieving Success

Drugs are increasingly complex and regulatory requirements are more rigorous and changing at a faster pace. In every drug, each drop is important. That is why using the proper packaging is crucial in protecting drugs against unnecessary risks. Each drug should be packaged with the same standards and due diligence it was created with. NovaPure® components were created by focusing on the necessary improvements needed to increase the standards on packaging.

Benefits:

- **Utilize a plunger designed for use with an auto-injector** – With NovaPure® unique plunger design with FluroTec™ barrier film, you may reduce the risk of field failures, contribute to patient safety, and increase market share
- **Meet or exceed rising particulate standards** – With NovaPure® component manufacturing innovation, you'll be more likely to reduce waste, increase throughput and contribute to patient safety.
- **Reduce silicone oil migration while lubricating plungers** – With B2-Coating, you will work toward reducing the amount of free silicone oil, gain greater manufacturing flexibility, and be better equipped to handle increasingly sensitive molecules
- **Select a packaging solution that will help you to achieve regulatory compliance** – NovaPure® components can help you meet EU GMP Annex 1 requirements and streamlines your Medical Device Regulations (MDR) filing via a comprehensive Technical Document Packaging for NovaPure.

Syringe plunger available sizes:

- West's highest quality components with visible and subvisible particulate specifications
- 100% Envision™ Verification Process camera-inspection of each component
- FluroTec Barrier Film minimizes interactions between drug and the closure
- B2- Coating to provide lubricity without free silicone oil
- Verified extractables profile for leading rubber formulations 4023/50 gray
- Available Ready to Use (Steam Sterilized)
- Process Capability Index (CpK) for dimensional control
